## Tanzania Success of the Mkuranga-1 well

## Congo Presence of a reservoir on Loufika-2

---

### TANZANIA

The Mkuranga-1 well (**M&P 60%**) has revealed the presence of gas in the Ruaruke formation (Cretaceous Superior) 2 030m deep. During the isochron tests, the well has shown a constant flow of 19.2 million cubic feet per day on a 48/64 inches choke with a top pressure of 1 465 psi during a 4-hour period. These parameters are currently being assessed on a longer period. The drilling site is located 5 km from the gas pipeline to Dar-es-Salam, giving direct access to the Tanzanian gas market.

### CONGO

On the Kouilou exploration permit (**M&P 65%**), the Loufika-2 well confirms the northwestern extension of the shallow reservoir already revealed by the Loufika-1 well some 2km away. Five additional wells are planned in 2007 to delineate the discovery.

The Loufika-1 well is in a production tests phase since January 2, 2007. The 270 b/d production is transferred by truck to the Kouakouala field.

This press release may contain forward-looking statements with respect to the financial condition, results of operations, business, strategy and plans of Maurel & Prom. By their nature, forward-looking statements involve risks and uncertainties because they relate to events and depend on circumstances that will or may occur in the future. These forward-looking statements are based on assumptions which we believe are reasonable but that could ultimately prove inaccurate and are subject to a number of risk factors, including but not limited to price fluctuations in crude oil; exchange rate fluctuations; uncertainties inherent in estimating quantities of oil reserves; actual future production rates and associated costs; operational problems; political stability; changes in laws and governmental regulations; wars and acts of terrorism or sabotage.
